A FAILED DEBIT STOPS THE SIP BEFORE ANYONE CHOOSES TO LEAVE

1. What is the problem?

The metric is simple: of people who start a mutual-fund SIP, how many still have one running 12 months later? Two problems break that, and neither is "they chose to leave."

Involuntary leak

A debit fails, the mandate expires, the bank changes, or the balance is short. The person did not decide to stop. In our tagged comments this is the largest in-scope group:
333 of 837
(39.8%). Only
0.9%
of those 333 say the SIP actually ended.

Lack of knowledge

People ask how to start a SIP, which step is left, or why a debit failed. That shows up on setup (A2, 74 in-scope comments; top line is "how to start a SIP") and in a pasted interview: the person did not know how to read the data, then withdrew and cancelled.

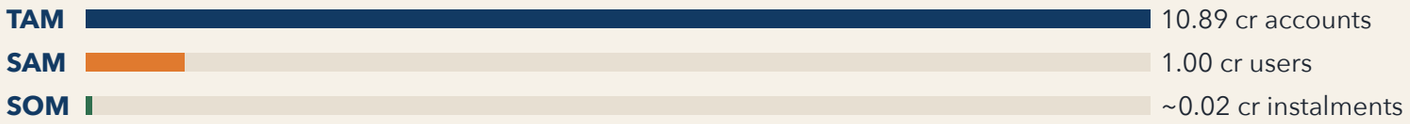

Comment counts: **data/problem_candidates.csv** and **data/final_retag.csv**, confident in-scope rows. Public comments, not customer rates. Groww itself has 17 C2 comments — under 30, so not a Groww rate.

Why this should be addressed — Why it becomes a stop

- What people say on a failed debit: "auto payment not working", "repeated SIP failure", "payment failed but money debited". The step they take outside the app is Google.
- AMFI, quoting SEBI: if 3 monthly instalments in a row fail, that SIP is treated as discontinued. A debit the app does not explain can be counted as a stop.
- NPCI NACH, September 2026, computed by Measure of India: **25.2%** of recurring debits came back unpaid (4.9 crore of 19.6 crore). This is EMI, SIP, insurance and bills together, not SIPs alone. Many are paid on a later try.

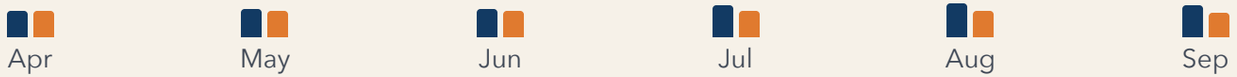

2. Impact sizing / who it is for

Who: a first-time mutual-fund investor on Groww whose SIP should still have one successful instalment in the last 30 days, a year after they started.

One scale, in crore. **TAM:** SIP accounts outstanding, AMFI, Sep 2026. **SAM:** 10.03 million Groww mutual-fund users, FY26 report. **SOM** is an assumption: if 5% miss one instalment and 40% of those stay open, about 2.0 lakh. Not a measured loss. 333 comments, 17 on Groww, do not size it.

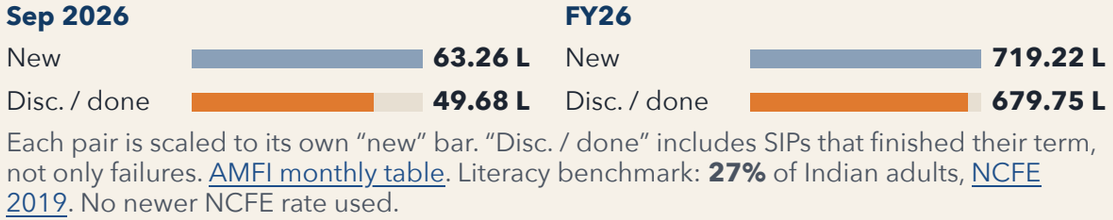

Market trends — New vs discontinued, lakh of SIPs

Navy is new. Orange is discontinued or tenure completed. Lakh of SIPs, AMFI, Apr–Sep 2026. New: 50.71, 54.16, 55.51, 61.44, 66.4, 63.26. Discontinued: 51.29, 51.7, 50.64, 50.3, 53.82, 49.68. In April, discontinued was higher than new.

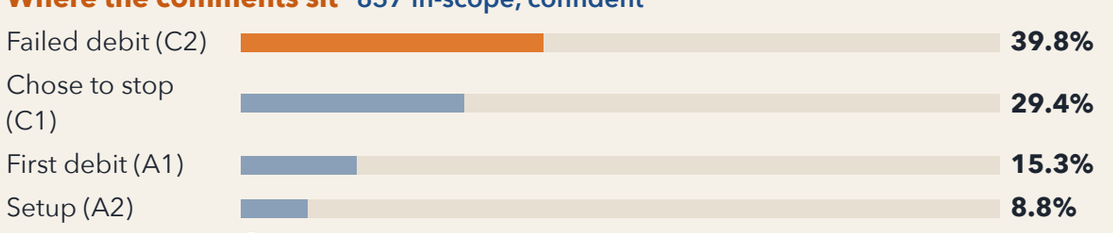

3. Market landscape — Source

₹32,490 cr	10.89 cr	₹17.86 L cr
SIP money collected in September 2026	SIP accounts still outstanding	SIP assets, same month

Each pair is scaled to its own "new" bar. "Disc. / done" includes SIPs that finished their term, not only failures. AMFI monthly table. Literacy benchmark: **27%** of Indian adults, NCFE 2019. No newer NCFE rate used.

Where the comments sit — 837 in-scope, confident

1. The instalment is not debited.
2. The person cannot tell why.
3. They look outside the app.
4. Three misses can count as a stop.

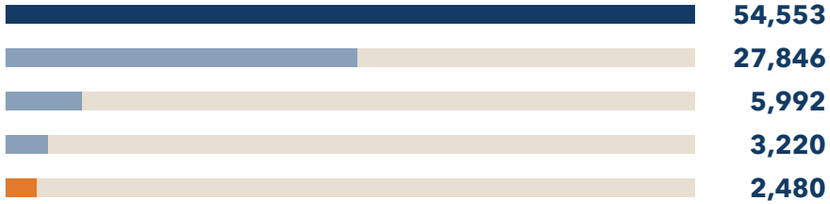

Analysis of public comments. Not investment advice. Comment file dated with the retag of 2,480 rows. Market figures are the months named above, not a forecast.

WHY THIS ENGINE

The question is: of people who start a mutual-fund SIP, how many still have one running 12 months later? Active means one successful instalment in the last 30 days. Public comments were collected and sorted onto that path, so a failed month could be seen before the interviews and the prototype. It is a reading aid. It is not a customer rate, and it does not recommend a fund.

Overview graph Is the pile big enough to read?

The first chart is how many comments remain after each step. The second is those raw comments by source. The third is the working file by source.

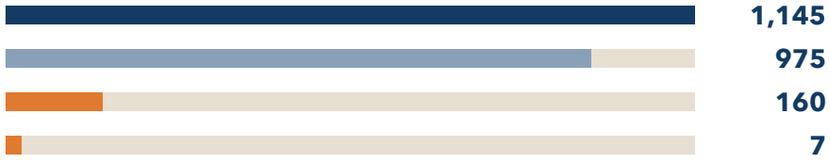

Play Store 45,645. YouTube 5,905. App Store 2,990. Thirteen lines pasted by hand, four of them Reddit excerpts already read. Reddit was not scraped. No usernames. The overview chart reads the collection log. These slides use the current file: 2,480 rows, 2,287 confident, 188 needs review, 5 dropped.

What the file found

333 of 837 (39.8%) are a failed debit, expired mandate, bank change, or short balance. 289 (86.8%) still continuing. 3 (0.9%) ended. Groww is 17, a pattern, not a rate.

Working file by source 2,287 confident comments

YouTube's 975 name no app. Of the rest: Zerodha Coin 501, ET Money 339, Kuvera 211, Paytm Money 112, Groww 95, INDmoney 47. Groww's 95 are every confident Groww comment, not the 17 failed-debit comments.

Metric tree and ranking

- The tree is the 12-month path. A1 and A2 are setup and the first debit. B is months 1–3. C1 is a chosen stop. C2 is the failed debit. C3 is a miss fixed in time. D1 is a successful instalment in the last 30 days. E1 is a restart. None is everything else.
- Each box gets a count. The largest in-scope leak is outlined and labelled **Largest leak**. A bar under the boxes shows the same counts. On this file that box is C2. The chart highlights that box. The app menu opens on Groww. A count under 30 is marked too few to rely on.
- Ranking is how common × how serious × how fixable. Fixability is set by hand, not by the model. Severity stays 1 when the SIP is still continuing, including a failed debit the comment does not say ended. That is why C2 can lead even though 86.8% of those comments are still open.

Questions: how to ask

Type one question and press **Find the answer**. No list. The answer is a short lead, sometimes a table, and quotes from the comments. Apps: Groww, other apps, YouTube, or all. Under 30 says too few. Unmatched questions search the comment text. "Why do people pause a SIP?" fits. Income, age, and influence are mostly unstated.

Try one comment, and what stays out

Paste a public comment and press **Tag this comment**. The page returns the box, a confidence from 0 to 1, and a quote copied from the paste. Under 0.60, or if a check fails, it says **Not sure, needs human review**. That paste is not saved and is not added to the ranking. 188 comments are already in that unsure set. They stay out of the tree and the ranking. Themes are confusion points, unmet needs, workarounds outside the app, and chosen stops against failed debits.

How the tags were checked

105 comments were labelled by hand, 15 in each of 7 groups. The first check agreed on the stage for **47 of 105**. Six misses were written into the prompt: a question, a hypothetical, a wish to start, or money that has not come back after a cancel is not that person's failed or cancelled SIP. The odd 53 rows tuned the prompt. The even 52 were the test, once, at temperature 0: stage **44 of 52** (was 24), exact tag **40 of 52** (was 21). Stage C fell from 14 of 14 to **10 of 14**. The full file was then retagged. Frozen 2 November 2026. NVIDIA, one comment per call. Not a survey.

Public comments only. Not investment advice. The collection log's last tagged count was 2,477. The file these slides use has 2,480 rows.

INVOLUNTARY LEAKS: FAILED DEBIT, EXPIRED MANDATE, BANK CHANGE, LOW BALANCE

HYPOTHESIS

- This is not a chosen stop. The month breaks in one of four ways: the debit fails, the mandate expires, the bank changes, or the balance is short. Those four are the largest in-scope group, **333 of 837 comments (39.8%)**. **86.8%** of them say the SIP is still continuing. Only **0.9%** say it ended. People are stuck in the month.
- The four are not one action. A bank change needs a form on the page, which Kritika, 30, never got. Money that has already left needs a wait or a return, not a second debit. That is Madhuri, 26. A failed debit can still be paid once. An expired mandate is a renew for the next date, not a new SIP.
- Today the page shows one dead end, so the person searches, pays by hand, or pays again. AMFI, quoting SEBI: three monthly misses in a row and that SIP can be treated as discontinued.
- **The bet:** if the page names which of the four happened, and the next step cannot charge them twice, this month finishes before the next due date. Not measured. No survey was fielded. The same complaint is already public on the apps in the table. Groww's 17 comments are a pattern, not a Groww rate.

What the comments are — Not a survey

39.8% — **The four leaks** — 333 of 837

29.4% — **Chose to stop** — Not this leak

15.3% — **First debit** — Never starts

8.8% — **Setup** — How do I start?

Primary persona — Closest match

Kritika, 30

Working professional. Groww had been working. Illustration, not her photo.

"There was no form and no email when my bank changed."

Others we spoke to

Madhuri, 26 — Same problem
Money left the bank and did not show in the NAV.

Ruchi, 26
Autopay only after she has already paid by hand.

Manas, 23
Student. A bot on the open page, then support.

Akshay, 22 — Later
Could not read the SIP, so he cancelled.

Akshay — Later
No second age. The path after a redeem.

Tarun, 33 · Rohan — Later
A charge before a small gain. A status, not a return alert. Rohan's age was not recorded.

Pain points discovered

Bank changed, nowhere to update it — Closest match
No option and no email. The ongoing SIP failed, and the NAV was not allotted. Kritika, 30.

The debit vanished
Money left the bank and did not show in the NAV. The in-app AI and support both stopped short. Madhuri, 26.

Autopay is hidden
The SIP is paid by hand every time. Autopay appears only after a payment has already been made. Ruchi, 26.

The screen was unreadable
A new ₹500 SIP was cancelled after four months because the early result could not be read. Akshay, 22.

Opportunities

Update the bank on the page
A form where the SIP already is, without waiting for an email, so this month can still be debited and allotted.

A bot on that same page
It answers first and reaches support when it cannot. Manas, 23, and Madhuri both asked for this. Return alerts and "should I stop?" stay out.

Behaviour

- The app can be fine until the bank changes. Kritika got no form and no email, the instalment failed, and the NAV was not allotted.
- A debit that does not appear becomes a support visit. That is Madhuri. Manas wants that help on the page he already has open.
- Some pay by hand every month because autopay is not on the page until a payment is made. That is Ruchi.

27% of Indian adults were financially literate, NCFE 2019. Not these interviews.

Competitive research — Public comments in the 333. Not a product audit.

Player	Of 333	What people wrote	Gap in the comment
Zerodha Coin	**122 · 36.6%**	Money left the bank. The order did not execute, or the SIP did not update.	A failed debit and money already left look like one dead end.
ET Money	**52 · 15.6%**	Auto-debit missed even with balance. Bounce charges called too high.	No named next step: pay this month once, or wait.
Paytm Money	**21 · 6.3%**	Autopay does not run. App Store, 8 May 2025: "issue with the auto debit option."	The next step stays a search, outside the instalment.
Groww	**17 · 5.1%**	Declined, stuck over a month, or failed in August. Interviews: Kritika, Madhuri.	17 is a pattern, not a rate. Separate a bank change from money that left.
Kuvera	**13 · 3.9%**	Debited, NAV not allotted. Mandate done, and the debit still not cut.	A mandate and money-already-left are different breaks.

Shares of these 333 comments, not customers and not market share. YouTube with no app named is **103**, not a player. INDmoney is **3**, too few for a row. NACH, Sep 2026: 25.2% of recurring debits unpaid. EMI, SIP, insurance and bills together, not SIPs alone.

Impact

333
Largest in-scope tag. Stuck in the month, not gone.

3 misses
AMFI, quoting SEBI, can treat that SIP as discontinued.

10.03 mn
Groww FY26 mutual-fund users. The base we can reach. Not a

Eight interviews plus public comments. Not a survey. Not a teardown. Not investment advice. Kritika is the closest match. One Akshay note has no second age.

12. PROBLEM FRAMING

This is not "they chose to leave." The instalment fails, or the person cannot tell what happened, and the page does not separate a bank change, a failed debit, and money that has already left. They then search, pay by hand, or pay twice. Three misses can be counted as a stop.

THE JOB

When this month's instalment does not land, help me see what happened and finish it, or tell me not to pay again. If the bank changed, let me update it on the page.

13. How we know

- Largest tag: **333 of 837** (39.8%). Only **0.9%** say it ended. Groww is 17: a pattern, not a rate.
- **Kritika, 30.** Bank changed. No form, no email. SIP failed. NAV not allotted.
- **Madhuri, 26.** Money left the bank and did not show in the NAV.
- AMFI: three monthly misses and that SIP can be treated as discontinued. No survey.

14. Why now

Stops sit next to starts. Discontinued or completed SIPs were **94.5%** of new SIPs in FY26. That includes SIPs that finished their term. AMFI.

Groww, FY26, opened **over 43%** of new SIPs in India. Kritika's bank change is a current path. Waiting for a public Groww failure rate delays a screen we can test inside.

15. Who — Closest match

Kritika, 30. Working professional. Groww had been working. The break was the bank on a running SIP, and nowhere on the page to replace it.

The same job, a second break: Madhuri, 26. The money had already left, and the SIP did not show it.

Who the screen is for: a mutual-fund SIP investor on Groww whose instalment should still succeed this month. Not someone deciding whether to buy, sell, or stop.

Secondary research — Four public comments. No names.

"I invest in SIP. Money debited but didn't allotted, and the money is also not refunded."
Play Store · Groww · 16 Aug 2026

"SIP fail bata rha hai. Refund kab aayega."
YouTube · missed-SIP video · 18 Feb 2026

"Pending SIP payment option not available. Pay option also not available."
YouTube · Groww autopay video · 2 Nov 2025

"There is an issue with the auto debit option."
App Store · Paytm Money · 8 May 2025

Target user segment

SIP already running
Not someone choosing a fund.

This month broke
Bank change, or the debit did not land.

On Groww
Where the SIP was started.

Finish the month
Not a buy, sell, or stop decision.

Rationale for this segment

- The comment file ranks a failed debit first: **333 of 837**. The four lines above are from that set.
- Kritika and Madhuri already had a SIP. The break was the bank, or a debit that never showed. That is the job.
- Groww, FY26, opened over **43%** of new SIPs in India. **10.03 million** mutual-fund users is the base we can reach. No survey share is used.

16. For the person

The new bank is entered on the page, or they are told not to pay again. This month can still be allotted. No fee for the repair.

For the business

A better chance the SIP is still running a year later. This screen does not claim a share of the ₹46,624 crore of FY26 SIP inflows.

Public comments, eight interviews, and the published AMFI and Groww figures. Not a survey. Not a measured loss. Not investment advice.

PROBLEM PRIORITIZATION

WHAT IS THE TRUE PROBLEM?

C2 is a debit that failed, a mandate that expired, a bank change, or a balance that was short. On a SIP that is already running, that is the largest in-scope box: **333 of 837, 39.8%.**

Why? No form when the bank changes.

Why? A failed debit and money that already left look the same.

Why? The next step is a search, a manual payment, or a second debit.

ROOT CAUSE

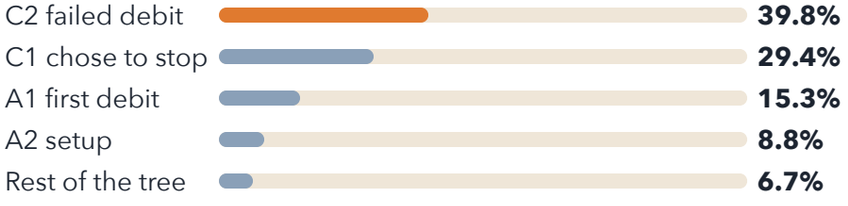

The page has one dead end for three different breaks. **86.8%** of the 333 say the SIP is still continuing. Only **0.9%** say it ended. People are stuck in the month.

WHY SOLVE IT NOW?

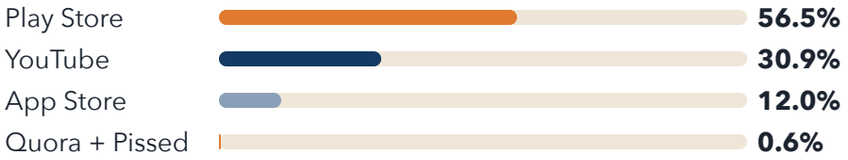

- **Competitive urgency.** The same C2 complaint is public on other apps in this file: Zerodha Coin 122, ET Money 52, Paytm Money 21, Groww 17. Groww's 17 are too few for a rate. The failure is already what people compare.
- **Market momentum.** Monthly SIP book **₹25,926 cr** in Mar 2025 to **₹32,087 cr** in Mar 2026. In FY26, discontinued or completed SIPs were **94.5%** of new SIPs. AMFI. That includes finished tenures.
- **Strategic alignment.** Groww, FY26, opened over **43%** of new SIPs and has **10.03 million** mutual-fund users. This screen sits on the instalment Groww already opens.
- **Perfect timing.** Three misses can be treated as a discontinued SIP. The fix-in-time box, C3, is **4 of 837 (0.5%)**. The leak is in the file. The recovery is not.

HOW DO WE KNOW? THE TREE, IN PERCENT

837 confident in-scope comments. One box each. No survey.

WHERE THOSE 333 REVIEWS CAME FROM

188, 103, 40, and 2 comments. Quora: "stopped taking money from my account." Pissed Consumer: the SIP was deducted and not updated. Reddit is in the manual file and is not inside these 333, so it has no percentage. **98.5%** of the 333 are an instalment of a SIP already set up.

WHO IS FACING THIS?

Someone whose SIP is already running. C2 is not the first setup. That is A1 and A2.

Kritika, 30. The bank changed. No form, no email. The SIP failed and the NAV was not allotted.

Madhuri, 26. The money left and did not show in the NAV.

Not someone choosing a fund, and not someone deciding to buy, sell, or stop. That chosen stop is C1, 29.4%.

VALUE GENERATED

For the business. A failed month is recovered before three misses can count as a stop. The file almost never records that recovery: C3 is 0.5%. No fee on this screen. No claim on the ₹46,624 crore of FY26 SIP inflows.

For the user. They see what happened. The new bank goes on the page, or they are told not to pay again. This month can still be allotted. 86.8% of these comments say the SIP is still continuing, so the person is still here.

REACH GUESSTIMATE

Outer ring. 10.89 crore SIP accounts outstanding in India, AMFI, Sep 2026. Accounts, not Groww users.

Middle ring. 10.03 million Groww mutual-fund users, FY26 report. The base we can reach.

Centre. About 2.0 lakh still-open missed instalments. If 5% of those users miss one month, that is 5.0 lakh. If 40% of those are still open, that is 2.0 lakh. At ₹2,000, about **₹40 crore** for one month. Both rates are assumptions. Not a measured loss.

IMPACT VS EFFORT

Left is lower effort. Right is higher effort. Top row is the higher impact on this leak.

Quick win · high impact, lower effort
Name the cause. No second payment if the money has left. Bank form on the page.

Major project · high impact, high effort
A live debit and allotment with the bank and the fund house. Not this demo.

Maybe · beside this leak
Show autopay before a manual payment. That is Ruchi's job.

Don't bother
Return alerts and which fund to buy. Wrong job for C2.

MVP SCOPE AND FEATURE PRIORITIZATION

MVP SCOPE

One screen for one monthly SIP when this month did not finish. The demo SIP is **₹2,000**, due on the **5th**, from a bank ending **4821**, open month November. Confirming does not move money. Nothing is written back to the comment file.

In scope: C2, a SIP already running. Out: first setup (A1 15.3%, A2 8.8%) and a chosen stop (C1 29.4%).

THE MVP FOCUSES ON

- **Which break.** Four chips: bank rejected the payment, autopay didn't send it, money left the bank but is not in the SIP, bank change.
- **One next step.** Pay this month only, update the bank, wait for units, or renew autopay. Three steps on the screen.
- **Helper, then a person.** The chat sits on the same page. Support is offered after an answer.
- **A safe demo.** No second debit. No fund name. No real payment. No real support agent.

VALUE PROPOSITION

- **For the person.** The cause is named. Kritika can put the new bank on the page. Madhuri is told not to pay again. This month can still be allotted.
- **For the business.** A finished month can be counted before three misses. C3, fixed in time, is **4 of 837 (0.5%)**. No fee. No claim on **₹46,624 crore** of FY26 SIP inflows.
- **For trust.** The helper does not name a fund, predict a return, or show an account number.

ATOMIC UNIT

One loop: name the break, take the one safe step, close this month. The amount stays ₹2,000. The next date stays 5 December. Not a new SIP. Not a fund choice.

RISKIEST HYPOTHESIS

People finish the month on this page once the cause is named and the next step cannot charge them twice. If they still search outside the app, or pay by hand, or pay again, the four chips did not fix the dead end.

Not measured. No survey was fielded. 86.8% of the 333 C2 comments say the SIP is still continuing, so the person is still in the month. That is not a completion rate.

FEATURE PRIORITIZATION

Feature	Priority	Why it's needed	Impact
Four named breaks on the instalment page	**Must have**	One dead end hid three causes. **328 of 333** C2 comments (98.5%) are an instalment of a SIP already set up.	**High**
Bank form on the page, other fields masked	**Must have**	Kritika, 30. The bank changed. There was no form and no email. The SIP failed and the NAV was not allotted.	**High**
No pay button when the money has already left	**Must have**	Madhuri, 26. The money was cut and was not in the NAV. A pay button here would charge the month again.	**High**
Pay this month only	**Must have**	Public comments said the pending-payment option was missing. The button marks the month received. It does not send money.	**High**
Helper on the same page, then support	**Must have**	Manas, 23, and Madhuri. The bot tries first. Then Yes, or No, connect me with support. Demo: no real agent.	**High**
Renew UPI autopay from the chat	**Should have**	Ruchi, 26, pays by hand. Autopay appears only after a payment. It is not a home chip. Beside C2, not the lead.	**Medium**
Chat history for this visit	**Should have**	The thread stays open so the person can see what was already said. It is not kept after the session.	**Medium**
Live debit and allotment with the bank and fund house	**Could have**	The major project from the impact grid. This demo cannot move money or allot units.	**Later**
Return alerts, or which fund to buy	**Won't have**	Wrong job for this leak. A chosen stop is C1, 246 of 837 (29.4%). Akshay, Tarun, and Rohan stay later.	**Out**

Groww has 17 C2 comments in this file. That is a pattern, not a Groww rate. Do not multiply 39.8% by 10.03 million users.

GTM STRATEGY

- **Where.** On the SIP that already failed, inside the app. Groww, FY26, opened over 43% of new SIPs. Not an ad. Not a new fund.
- **Who.** A running SIP. Kritika first, Madhuri second. Not someone setting up, and not someone deciding to stop.
- **Message.** Name what happened. Offer one safe step, or say do not pay again.
- **Moment.** Debit failed, autopay did not send, money already left, or the bank changed. Before the next 5th, and before three misses.
- **Learn.** Did this month finish here, or was a second payment refused? The 39.8% is comments. The ₹40 crore line is an assumption (5% miss, 40% still open), not a target.

MVP EXPECTATIONS

- The chip or the chat opens the matching screen.
- A bank change ends on the form. The account number stays masked.
- Money already left has no pay button.
- Support comes after an answer. The demo says nobody receives the ticket.
- **Pilot bar, not a result:** the month is finished before the next debit date. The file records that fix **0.5%** of the time today.

Public comments and eight interviews. Not investment advice. Not a measured completion rate.

SOLUTIONING AND USER FLOW

MUST-HAVE FEATURES

1. Name the break (Decide)
How it works. The failed instalment opens on ₹2,000, due on the 5th, bank ending 4821. A chip, or one sentence, matches a screen. That match does not call the model.
Impact. 328 of 333 C2 comments (98.5%) are an instalment of a SIP already set up. The old page used one dead end for a rejected debit, a bank change, and money that had already left.

2. One safe step (Act)
How it works. A rejected debit and an autopay that did not send both offer "Pay this instalment," and only this ₹2,000. Money already left has no pay button. A bank change opens the form: the account-holder name is optional, and bank, account, phone, and address stay ***.
Impact. Kritika, 30, had no form and no email when her bank changed. Madhuri, 26, had money cut that was not in the NAV. A pay button on her screen would charge the month again.

3. Close this month (Finish)
How it works. Debit path: month received. Bank path: masked details saved. Money-left path: units by 7 November on the demo, or ₹2,000 back. Amount stays ₹2,000. Next date stays 5 December. Confirming does not move money.
Impact. 289 of 333 (86.8%) say the SIP is still continuing. 3 (0.9%) say it ended. A fix in time, C3, is 4 of 837 (0.5%). The month is where these people still are.

4. Helper, then a person (Ask)
How it works. The chat opens with "Hi, what can I help you with?" A matched break offers "Yes, do it." Not now leaves the screen as it is. Any other question uses NVIDIA, temperature 0, at most two calls. Yes ends it. "No, connect me with support" points to Help in the Groww app. This demo cannot place a call. A handoff from the notes is a demo ticket nobody receives. History lasts this visit.
Impact. Manas, 23, wanted a bot on the open page and a way to support. Madhuri's in-app AI and support both stopped short. The helper tries first.

LATER, NOT THIS FLOW

- **Should.** Renew UPI autopay as its own home chip, before a manual payment. Ruchi, 26, pays by hand. Today that path is only from the helper.
- **Could.** A live debit and allotment with the bank and the fund house.
- **Won't.** Return alerts, which fund to buy, and redemption tracking. Akshay, Tarun, and Rohan stay out.

USER FLOW

Open the failed instalment · **₹2,000** · due on the 5th · bank ending **4821**

↓

Decide

What happened?
Four chips on the page, or one sentence to the helper. The match itself does not call the model.

↓

Act

Debit did not go
Bank rejected the payment, or autopay didn't send it. Button: pay this ₹2,000 only.

Money already left
No pay button. Units are pending. A second pay is refused.

Bank change
Account-holder name is optional. Bank, account, phone, and address stay ***. Send.

Autopay is off
Should-have. The helper offers this. It is not a home chip. Turn autopay on.

↓

Finish

Month received
This month is marked received. Next debit can go on 5 December.

Wait, or the money returns
Units by 7 November on this demo, or ₹2,000 goes back to the bank.

Bank saved
Masked details stored for the demo. Next debit can go on 5 December.

Autopay on
The 5 December debit can be sent. The amount stays ₹2,000.

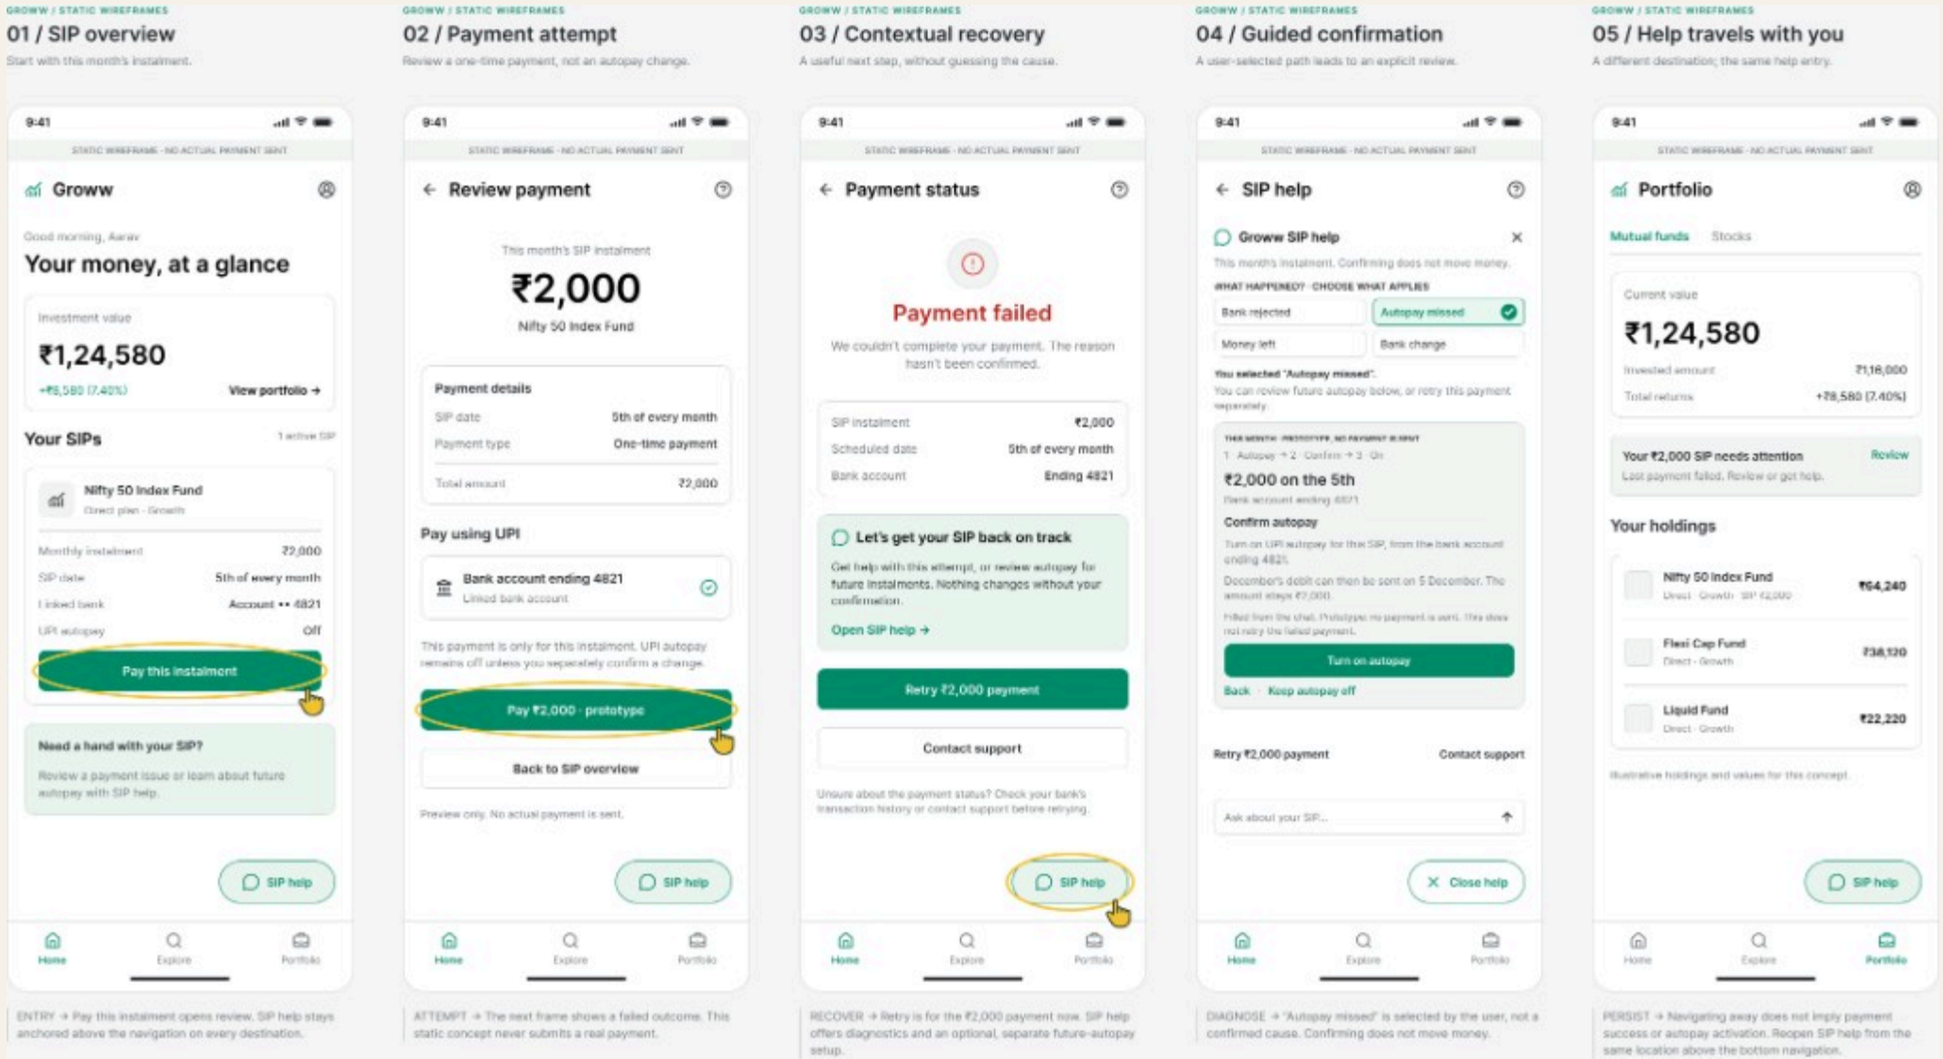

↓

Ask

Same page, if they are stuck.
"Yes, do it" opens the matching screen. On money already left, that screen still has no pay button. "Not now" stays put. A written question uses NVIDIA, temperature 0, at most two calls, and will not name a fund or a return.
Yes
ends the chat.
No, connect me with support
points to Help in the Groww app. This demo cannot place a call. A note handoff is a demo ticket. Nobody receives it. The thread lasts this visit.

One loop: name the break, take the one safe step, close this month. Public comments and eight interviews. Demo only. Not investment advice. Not a measured completion rate.

WIREFRAME IDEATION

01 · WHERE THEY START

This is the SIP home screen. The circled button, Pay this instalment, opens a check of this month only. SIP help is already above Home, Explore, and Portfolio, so they do not have to search for it.

02 · THE ONE PAYMENT

They review one payment of ₹2,000 from the bank ending 4821. Autopay stays off. The button says prototype, and no money is sent. The next screen is the failed debit.

03 · THE DEBIT FAILED

The app says the payment failed and does not yet know why. The person picks bank rejected, autopay missed, or money left. Retry is this ₹2,000 only. Support is on the same screen.

04 · AUTOPAY, IF THEY CHOSE IT

Autopay missed is the option they tapped. The app has not proved that was the cause. They can turn autopay on for 5 December, or leave it off. Confirming still does not move money.

05 · LEAVING IS NOT SUCCESS

On Portfolio, the ₹2,000 still needs attention. Opening another page does not mean the payment went through or autopay came on. Help is in the same place. Fund names and ₹1,24,580 are samples, not a fund to buy.

SYSTEM DESIGN, SUCCESS METRICS, USER JOURNEY MAP

SYSTEM DESIGN

SCREEN	→ WHAT RUNS THE PAGE	→ WHAT IT READS	→ OUTSIDE THIS DEMO
SIP help One monthly SIP. Four chips, the bank form, and the helper on the same page.	**Screen match** A sentence can open the matching screen. That match does not call a model.	**Comment file** 2,480 rows, read only. The demo writes nothing back. 837 confident in-scope. C2 is 333.	**NVIDIA** Only for a written question.
	Answer A written question uses NVIDIA only, temperature 0, at most two calls.	**This visit** The chat thread lasts this session. It is not kept after.	**AMFI** Three misses can count as discontinued. Sep 2026 book and accounts.
	Safety, then handoff Account numbers are masked. A fund or a return is declined. The ticket is a demo. Nobody receives it.	**Answer notes** A reply can cite an official page. Empty notes are not guessed.	**Groww, FY26** 10.03 million mutual-fund users. Over 43% of new SIPs.
			Not connected Bank, fund house, and a real support agent. This demo cannot place the call.

USER JOURNEY MAP

Phase	What they want	Where they are	What they do	From the notes	What the screen does
1. Open the month	See why this ₹2,000 did not finish.	The SIP page. Due on the 5th. Bank ending 4821.	They look for a next step, or they leave the app and search.	Kritika, 30, had no form and no email. Madhuri, 26, found the money gone from the NAV.	Pay this instalment is on the page. SIP help stays above the menu.
2. Name the break	Know which failure this is.	Four chips, or the helper.	They tap a chip, or say it in one sentence.	The old page used one dead end for three different breaks.	The sentence can open the screen with no model call.
3. One safe step	Fix this month without a second charge.	Pay, the bank form, or a status with no button.	Pay this ₹2,000 only, send the bank form, or stop because the money has left.	Madhuri did not want to pay again. Kritika wanted the new bank on the page.	Other bank fields stay ***. Autopay on or off is a separate confirm. Ruchi's path is from the helper.
4. Close this month	Know the month is received, saved, or waiting.	The done line. Next date stays 5 December.	They read the result. Confirming does not move money.	86.8% of the 333 say the SIP is still continuing. Only 0.9% say it ended.	Units by 7 November on this demo, or the ₹2,000 goes back. No live allotment.
5. Ask, then leave	A person only after the bot has tried.	The helper, then Help in the Groww app, then Portfolio.	Yes ends it. No, connect me with support. Then they may open Portfolio.	Manas, 23, wanted a bot on the open page and a way to support. Madhuri's in-app AI stopped short.	Cannot place a call. The note is a ticket nobody receives. Leaving is not the ₹2,000 paid.

Eight interviews, not a survey. Public comments, not customers. AMFI. Groww FY26 report. Not investment advice.

MEASURING SUCCESS

North star. This month is finished, or a second payment is refused, before the next 5th. That is one instalment, before three misses. Not measured. C3 is 4 of 837 (0.5%).

Type	Metric	Rationale
L1	**Customer lifetime value.** A SIP that gets this month finished, instead of stopping.	Not a measured lifetime value. If 5% of 10.03 million miss one month, that is 5.0 lakh. If 40% of those are still open, that is 2.0 lakh. At ₹2,000, about ₹40 crore for one month. Both rates are assumptions. Not a target.
L1	**Activation.** The matching screen opens.	328 of 333 C2 comments (98.5%) are an instalment already set up. That is the population, not a measured activation rate.
L1	**Acquisition cost.** None claimed.	The screen sits on a SIP already open. It is not a campaign to acquire a new user.
L2	**Engagement.** Helper used on this page, before a person.	Manas and Madhuri asked for the bot first. No time-on-page figure was collected.
L2	**Conversion.** Name the break, one step, close this month.	No percentage. No survey was fielded. 86.8% of the 333 comments say the SIP is still continuing. That is not this rate.
L2	**Revenue.** No fee on this screen.	No claim on ₹46,624 crore of FY26 SIP inflows in the Groww report.
L2	**Satisfaction.** Yes, or No, connect me with support.	No score was collected. There is no average rating.

PRE-LAUNCH GUARDRAILS

No second debit. Money already left has no pay button. If a test shows one, do not ship. Madhuri's month would be charged again.

No advice. The helper names no fund and no return. If it does, do not ship. The account number stays ***.

No real money and no real agent. Confirming does not move money. The handoff is a demo ticket nobody receives. A live debit with the bank and fund house is a later project.

POST-LAUNCH MONITORING

North star count. Months finished, or second payments refused, before the next 5th. The file records that fix 0.5% of the time today. No target rate is set.

Helper before a person. If people ask for support before the bot answers, review the helper. This demo cannot place a call.

Second debit stays at zero on the money-left path. If one appears, remove the pay button. Do not read success from the 39.8% comment share, and do not multiply it by 10.03 million.

RISKS AND MITIGATIONS

Why it might fail

- **A second debit.** If money has already left and the screen still offers pay, Madhuri is charged again. That is the failure the page exists to stop.
- **A mark, not an allotment.** The demo is not connected to the bank or the fund house. “Month received” does not mean units were allotted.
- **The wrong base.** Groww is 17 of the 333 comments. A screen built only on Groww’s own reviews would have missed the leak. 39.8% is comments, not a customer rate.
- **They never open it.** The old path is a search outside the app. If the page is not on the failed instalment, the four chips do not get used.

What we would change

- **Do not ship** a pay button on the money-left path. A second debit on that path stays at zero.
- **Say it on the screen.** Confirming does not move money. Live debit and allotment stay a later project.
- **Keep the full file.** Do not read success from 39.8%, and do not multiply it by 10.03 million users.
- **Put it on the failed SIP.** If people ask for support before the helper answers, review the chips. The helper tries first, then Help in the Groww app.
- **A reminder, if added,** names ₹2,000, 5 December, and the account ending 4821. It does not read the bank balance, and it does not say pay now when the money has already left. The bank’s own notice, at least 24 hours before a UPI Autopay debit, still has to go out. NPCI.

Public comments and eight interviews. Not investment advice. Not a measured completion rate.
