What the comment engine found, and what we corrected

54,550
Raw public comments. No usernames. Reddit was not scraped.

2,477
Retagged. 2,284 confident. Frozen 2 Nov 2026.

333
Largest in-scope tag: a debit that failed. Not a chosen stop.

17
Of those are Groww. Under 30, so this is not a Groww rate.

WHAT IT DISCOVERED

The leak is involuntary. The debit failed, the mandate lapsed, the bank changed, or the balance was short. Only 0.9% of the 333 say the SIP actually ended. People are stuck in the month, not gone.

Groww is 110 of 2,477 rows. The pattern is strong enough to build against. It is not strong enough to quote as Groww's failure rate.

WHAT WE CORRECTED

Test check	Before	After, temperature 0
Stage agreement	24 of 52	44 of 52
Exact tag	21 of 52	40 of 52
"None" – questions are not events	7 of 35	31 of 35
Stage C, the cost of the tighten	14 of 14	10 of 14

Six reviewed rows were all moved to "none": a question, a hypothetical, a wish to start, or money that did not come out after a cancel.

Source: data/evidence_summary.md and data/corrections.csv. Counts are comments, not customers.

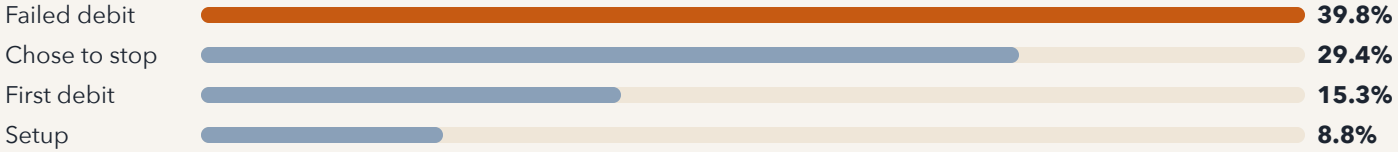

A SIP stops when the debit fails, or when the person cannot tell why

₹32,490 cr
SIP money collected in September 2026. AMFI.

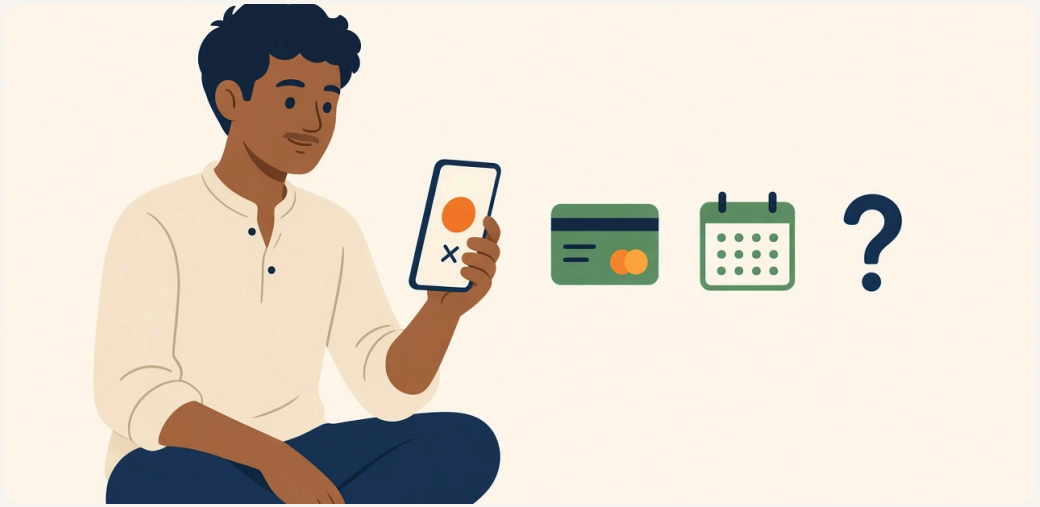

10.03 mn
Groww mutual-fund active users, FY26. Over 43% of new SIPs in India.

39.8%
Of 837 in-scope comments are a failed debit. 333 comments, not 333 customers.

WHERE THE COMMENTS SIT

AMFI, quoting SEBI: three monthly misses in a row and that SIP is treated as discontinued. NACH, September 2026: 25.2% of recurring debits came back unpaid. That mix is EMI, SIP, insurance and bills, not SIPs alone.

Involuntary
The bank, the mandate, or the balance stopped the month. The person did not decide to leave.

Illegible
They cannot read the screen, so they search, or they cancel. That is the second break.

Five interviews. No survey was fielded.

HYPOTHESIS

If we name the cause of a missed instalment and offer one safe next step, more of those SIPs are completed before the next due date. If the money has already left, the step is an explanation, not a second payment.

BEHAVIOUR

New investors leave when the first months are hard to read. A debit that vanishes creates a support visit. Some redeem at the first visible gain. Some almost never look.

OPPORTUNITY

Explain the debit inside the app, before they search. Do not take the neighbouring jobs yet: redemption tracking, return alerts, or "should I cancel."

PAIN

"The money was cut. It was not in the NAV."

Madhuri, 26. The in-app AI and support both failed her. She wanted a bot that tries first, then a person.

PAIN

"I could not read the data, so I cancelled."

Akshay, 22. A ₹500 SIP, a friend's recommendation, gone after four months. YouTube was not an assistant.

PAIN

"I do not know where the money actually is."

Akshay, on redemption. He moved one or two SIPs. Tarun, 33, books a small gain and dislikes the charges. Rohan rarely looks, and only reacts when he happens to open the app.

Interview highlights, not a transcript. The third note reuses the name Akshay and gives no second age.

Research evidence is the comment file plus these five conversations. There is no survey percentage to quote.

04 · PRIMARY PERSONA

Madhuri, 26. The debit left. The SIP did not show it.

JOB TO BE DONE

When money leaves my account, show me whether this month's instalment is still on the way, and bring a person if that explanation is not enough.

Aspiration

A chatbot that tries first, then a direct handoff.

Pain

Amount debited, not in the NAV. AI and support both dead ends.

"The money was cut. It was not in the NAV."

WHY THIS PERSON, NOT THE OTHERS

She is the involuntary leak the comments already ranked first. Akshay, 22, is the knowledge break and stays in view. Redemption, profit-booking and "tell me the return" are real, and they are the next journeys, not this release.

OTHERS WE SPOKE TO

Who	Job	In this release
Akshay, 22, student	Read a new SIP before judging it	Plain language only. No fund tips.
Akshay, redemption	See the path from the fund house to the bank	Later
Tarun, 33	See the charge before booking a small gain	Later. We will not say stay or leave.
Rohan	A status without becoming a researcher	Not a return alert

10.89 cr

SIP accounts outstanding, Sep 2026. The wide market. Not our users.

10.03 mn

Groww mutual-fund users. The reachable base. FY26 report.

Not yet

No serviceable slice until the internal unrecovered rate exists.

Persona from the interview notes. Market counts from AMFI and the Groww FY26 annual report.

05 · THE TRUE PROBLEM

The month fails in the gap between the bank and a screen they cannot read

ROOT CAUSE

The app treats “payment failed”, “money already left”, and “I cannot read this” as the same dead end. People then search, pay twice, or cancel.

HOW WE KNOW

- It is still the largest in-scope tag after questions were removed.
- Three misses can be treated as a discontinued SIP.
- Madhuri lived the missing debit. Akshay, 22, lived the unreadable screen.
- We do not know the Groww rate. Seventeen comments cannot carry one.

THE JOB, IN ONE LINE

When this month’s instalment does not land, help me see what happened and finish it, or tell me not to pay again.

WHO

A first-time mutual-fund SIP investor. Small amount. New words: NAV, mandate, allotment. One confusing month is enough.

WHY NOW

FY26 discontinuations sit close to new SIPs. Groww opens a large share of those new SIPs. Waiting for a perfect public rate delays a screen we can test inside.

VALUE FOR THE PERSON

One month completed, or a clear “do not pay again.” Less time in support. No advice, and no fee for the repair.

VALUE FOR THE BUSINESS

A better chance the SIP is still running at month 12. Trust at the moment people currently leave. No claim on the ₹46,624 crore of FY26 SIP inflows.

06 · SOLUTION PRIORITY

Fix the missed month first. Leave the other jobs named, and out.

Option	What it does	Impact on this leak	Effort	Now
Pay this instalment only	Recovers the month. Does not change the SIP.	**High**	**Medium**	In the prototype
Money already left	Stops a second debit.	**High**	**Low**	In. No pay button.
Autopay off or not sent	The debit never starts, so every month is manual.	**High**	**Medium**	In the prototype
Bank change	Old account cannot send it. Name is optional. The rest is ***.	**Medium**	**Low**	In. Send under the fields.
Redemption tracker	Shows the path from the fund house to the bank.	**Medium here**	**High**	Later
Return or stock alerts	What Akshay and Rohan asked for.	**Wrong job**	**High**	Refused. It becomes advice.

MVP, IN ONE BREATH

Sample SIP, ₹2,000 on the 5th, bank ending 4821. Four causes. Three short steps. One green action. Chat opens with “Hi, what can I help you with?” If the answer is not enough, offer a call. This demo cannot place it, and it cannot move money.

GUESTIMATE, LABELED

If 5% of 10.03 million miss one instalment, and if 40% of those are still open at the next due date, that is about 2.0 lakh instalments, about ₹40 crore at ₹2,000. Both rates are assumptions. Do not use ₹40 crore without them. It is not a measured loss.

Priority is for this leak only. The prototype already contains the first four rows.

Decide, then plan, then commit, then reflect

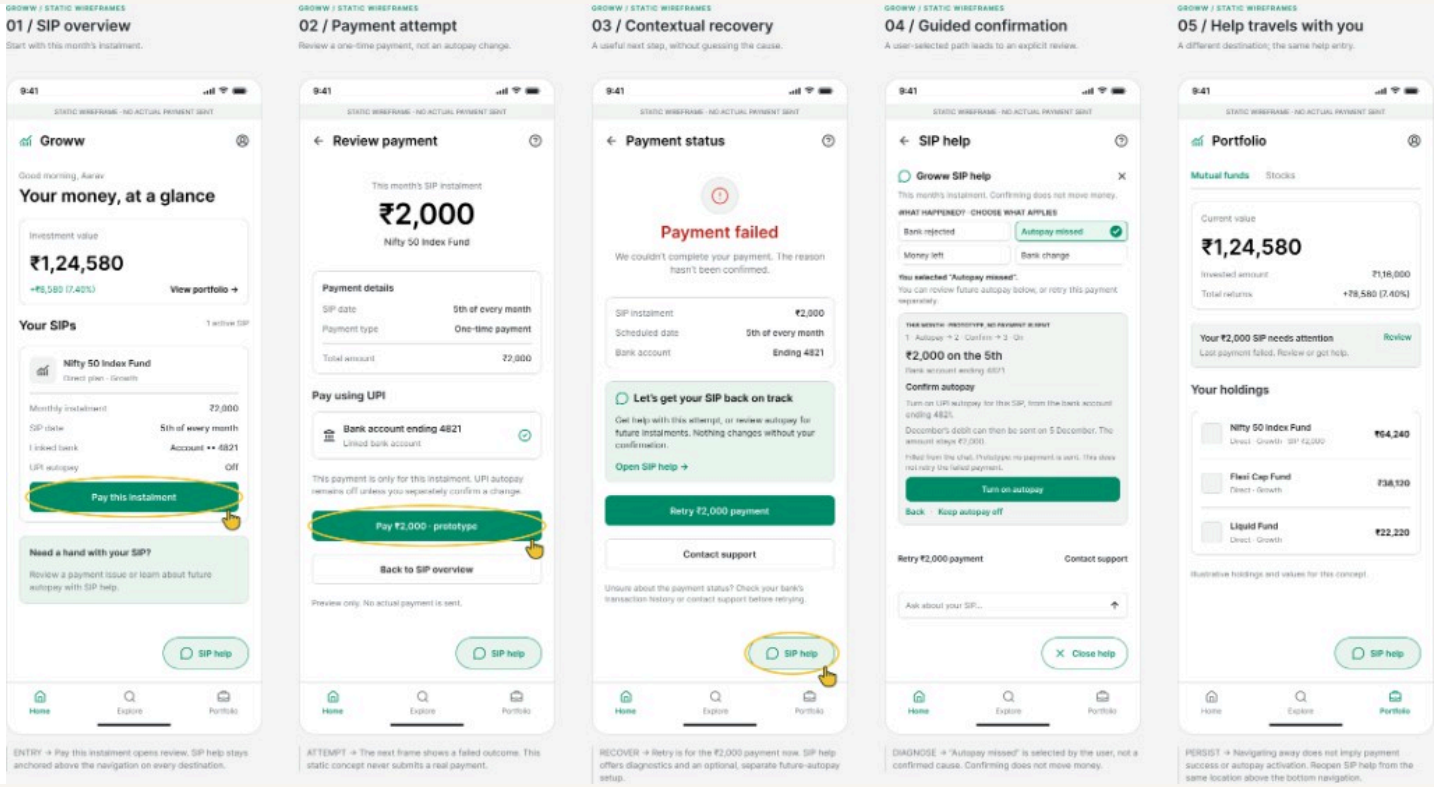

Decide
Pay this instalment. Autopay stays unless they confirm a change.

Plan
Payment failed. Reason not confirmed. Retry, or open SIP help.

Name it
Bank rejected, autopay didn't send it, money left, or bank change.

Commit
One green step. If the money has left, there is no pay button.

Reflect
"Are you satisfied?" Yes ends it. No offers a call. Leaving the screen does not complete the payment.

Fund names and returns on these phones are illustrative. The prototype does not show them.

Do not charge for the repair. Do not pay the month twice.

BUSINESS RISK · HIGH IMPACT

A second pay button after the money has left creates the next complaint. Mitigation: that path has no pay button. This screen takes no fee. A recovered ₹2,000 is retained contribution, not a new charge.

MARKET RISK · MEDIUM

Recurring-debit failure is industry-wide. The screen can be copied. Mitigation: show it on our own failed debit, with our own next date, not as a separate app or an ad.

OPERATIONAL RISK · MEDIUM

A bot that guesses increases support. That is Madhuri's experience. Mitigation: under 0.6 confidence, refuse, then offer a call. The support link is still to be verified. The demo cannot place the call.

Also watch	Response
Comment share is read as a customer rate	Say 333 comments, and 17 on Groww, every time
The screen starts giving advice	Block news, returns, fund names, and "should I stop"
A phone or account number is typed	Mask it. On a bank change, only the name can be typed
We ship before the chat is scored	Fifteen golden rows still need labels. Do not deploy on an empty score

Distribution. On the failed-payment screen, beside retry. SIP help stays in the bar after they leave. The chat answers "why did this fail?" Nothing urges a larger investment.

FY26 SIP inflows of ₹46,624 crore are context. This screen does not claim a share of them.

North star: failed instalments recovered before the next due date

WHY THIS METRIC

It is the behaviour we want: the missed month is finished, or the person is told not to pay again and does not. It is not comment volume, not app opens, and not a return.

WHAT SITS UNDER IT

Lens	Count	Guardrail
Activation	Opened SIP help from a failed debit	No scare line, no countdown
Engagement	Finished the steps, or marked the answer helpful	No guess under 0.6 confidence
Conversion	Month received, autopay on, or bank form sent	No second debit
Revenue	None on this screen	No fee to repair the explanation
Satisfaction	“Are you satisfied?” then a call if not	No invented support number

HOW THE PROTOTYPE IS BUILT

Screen
A state machine. The four causes and the one green button do not call a model.

Chat
Masks personal numbers. Refuses advice, news, returns and fund names. At most two model calls. Replies follow the language of the message. The visit stays in the browser.

Not yet true
The rate is not instrumented. The chat score has not been run. The prototype shows the path. It does not report the north star.

Decision
Measure the internal unrecovered rate. Keep this scope. Replace the assumption guestimate only after that rate exists.
